

컷 생성 프롬프트 (모델: Seedance 2.5)

A 15-second clay stop-motion scene in 16:9. Handmade plasticine puppets on the same miniature architectural-office set, photographed frame by frame. Four consecutive shots continue directly after @Video1.

REFERENCES

@Image1 defines HEADY's resting pose and the local tabletop dressing: his chin and lower cheeks pressed against the table, three loose yellow pencils on image left, and three visible yellow sticky-note pads on image right, including partially cropped items. Preserve their physical positions, orientations, and scale across camera angles. His hair pencil is separate and stays in his hair.

@Image2 is TEAMMATE 02's character sheet.

@Image3 is TEAMMATE 01's character sheet.

@Image4 is the SUPERVISOR's character sheet.

@Image5 is HEADY's character sheet.

Preserve each character's exact identity, proportions, clothing, accessories, sculpted hair, and craft googly eyes. Never render sheet layouts or labels.

@Image6 defines the office architecture, furniture, props, and lighting. For the tabletop directly around HEADY, @Image1 takes priority over the larger assortment of pencils and notes in @Image6.

@Image7 defines the room's floor plan and character positions.

@Image8 defines the small floating cream clay components.

@Video1 is the preceding scene. Continue its ongoing design explanation and retain the collapsed whiteboard: dark tower outline, white clay heap, and remaining support. Do not restore the intact tower shown in @Image6.

@Video2 is the previous attempt at this sequence. Use ONLY its first shot and final SUPERVISOR close-up as approved references for composition, character acting, and visual treatment. Replace its pencil-model construction, its changing model geometry, and its name-call timing with the instructions below.

CORE CONTINUITY

HEADY keeps his chin and lower cheeks against the tabletop throughout Shots 1–3. Do not raise his head or sit him upright. His eyes, eyelids, eyebrows, and mouth may move subtly.

Begin with exactly three loose pencils on the table. When they rise, their original places become empty. Additional matching pencils may materialize in the air during the imaginary assembly. Do not leave duplicates of the original pencils on the table. The notes and other tabletop props remain stationary.

The cream floating components remain separate from the yellow pencils and never become part of the architectural model.

ONE FIXED ARCHITECTURAL MODEL

Build a recognizable miniature architectural framework of a single-storey pavilion with a pitched gable roof and an open interior.

Use thirteen complete yellow pencils:

- Four upright corner columns.
- Four horizontal beams connecting their tops into a closed rectangular perimeter.
- Four sloping roof rafters, forming a triangular gable at each end.

— One ridge beam connecting the two roof peaks.

The result has a clear building footprint, four corners, an open room beneath the roof, and a recognizable pitched-roof silhouette. It should read as an architect's skeletal pavilion model. It must not resemble the stepped tower on the whiteboard.

Every structural member remains visibly a whole yellow pencil, including its ends, ferrule, and eraser. Preserve each pencil's length and thickness once introduced. No splitting, stretching, fusion, or transformation into plain wooden sticks. No solid walls, roof panels, miniature windows, or extra architectural materials.

Complete the entire pavilion before cutting from Shot 2 to Shot 3. Once complete, lock every pencil's position, orientation, and connection. Shot 3 shows this exact same assembly from a different camera position. No further construction, disappearing pieces, new pieces, simplification, rebuilding, or rotation of the model across the cut. Parallax changes because the camera moves; the structure itself does not.

FLOW AND PACING

Keep the total duration at 15 seconds. Let the shot lengths follow the actions naturally, while respecting the three evenly spaced audio cues below. Reserve approximately two seconds after the final shout for the SUPERVISOR's angry face and breathing.

Shot 1 — HEADY medium shot, high angle:

Match the successful opening shot of @Video2, with HEADY's resting pose and tabletop arrangement anchored to @Image1. His chin and lower cheeks remain pressed to the table.

The cream components drift just above the tabletop within his line of sight. He watches blankly and blinks, moving his eyes while his body stays still. The SUPERVISOR is already speaking off-screen about the design from the first moment.

Shot 2 — over HEADY's LEFT shoulder, low seated eye level:

Look past HEADY's left shoulder and plum hair toward the tabletop. Preserve his lowered posture.

The three original yellow pencils rise, followed by additional matching pencils materializing in the air. Build the pavilion in an understandable sequence: corner columns, connecting perimeter beams, then the two gables and the roof ridge. No hands touch the pencils.

The SUPERVISOR remains visible in the distant background, slightly out of focus, beside the collapsed whiteboard. The SUPERVISOR continues explaining, then calls "Heady?" and waits without receiving an answer.

Let the complete pavilion hold briefly at the end of this shot so its four-column structure and pitched roof are clearly established before the cut.

Shot 3 — HEADY and the completed pavilion, low angle:

From near tabletop height, show the same completed pavilion in the foreground and HEADY's face beyond it. Choose a three-quarter view that reveals the roof ridge, both gables, and the depth between the front and rear columns.

Maintain all thirteen pencils in exactly the configuration established at the end of Shot 2. The model stays fixed in orientation and suspended above the table.

Begin with focus on the pencil architecture, then slowly rack focus to HEADY's eyes and faint smile. His chin remains against the table. He studies the model with quiet interest and does not answer the second, more impatient call: "Heady~?"

Shot 4 — SUPERVISOR frontal tight close-up, eye level:

Match the successful final close-up of @Video2. Frame the SUPERVISOR's face approximately from forehead to chin, with the expression filling the image and the identity matching @Image4.

After another unanswered wait, the SUPERVISOR sharply shouts "HEADY!" Hold the angry face and irritated breathing for approximately two seconds afterward.

Keep HEADY, the table, the pencil model, and all hands outside the frame. Do not reveal the model's physical reality in this video.

AUDIO — THREE EVENLY SPACED CALLS

No music. Maintain quiet office ambience.

Start with the SUPERVISOR already mid-explanation about the design, naturally continuing from @Video1. Use indistinct but clearly ongoing speech with normal phrasing and emphasis.

Anchor the START of the three name calls approximately four seconds apart:

- Around 3.5 seconds, during Shot 2: "Heady?"
- Around 7.5 seconds, during Shot 3: "Heady~?"
- Around 11.5 seconds, during Shot 4: "HEADY!"

These are audio timing anchors, not rigid shot-duration boundaries. Preserve the evenly spaced rhythm. Do not delay the second call until just before the final shout.

Keep each call brief enough to leave a distinct unanswered waiting period. The first is a normal attempt to get attention; the second is slightly drawn out, louder, and impatient; the third is an angry shout. After each of the first two calls, the SUPERVISOR stops speaking and waits while HEADY remains absorbed.

Delicate mysterious effects accompany the assembly and the completed model. A short riser builds into the cut to Shot 4, then stops along with the mysterious effects before the final shout. Finish with approximately two seconds of irritated breathing over normal office ambience.

Position off-screen speech according to the SUPERVISOR's physical location beside the whiteboard and the camera angle. The three calls of HEADY's name are the only clearly intelligible speech.

STYLE

Photographed physical clay miniature quality: fingerprints, thumb dents, joined seams, sculpted hair, irregular rounded edges, and tactile props. Warm diffused window light, gentle fill, soft shadows, creamy highlights, and restrained earthy colors. Subtle frame-by-frame puppet acting and smooth camera movement.

No polished CGI, extra characters, extra limbs, reference-sheet layouts, floor-plan graphics, captions, speech bubbles, logos, or watermarks.
